Canon IP4000 bekapcs gondok

Sziasztok!<http://www.humanconsulting.cz/media/craftsman-mig-welder-manuals.xml>

Csapdaba estem, a saját nyomtatóm adta meg magat. Egy festekpatron csere után azt kerte a nyomtató, hogy nyomjam meg az újratek gombot. Ezután a nyomtató kikapcsolt és képtelen vagyok újra bekapcsolni. Szétbontás után a tapon két feszültséget merek, olyan 7,6V és 8,4V körül. A taponak tunika. Azt írja a szervizkönyv, hogy ilyen esetekben cseréljünk tapot, vagy logic boardot, azaz a fopanelt. Akkor persze kukába megy az egész, mert azt beszerezni csak szervizen keresztül lehet, többé kerül a leves, mint a hus. Kérdésem tudja-e valaki, hogy hány volttal megy ez a kábel, mert amit mertem az szerintem nulla. Illetve olvastam a fórumon egy hasonló jószágról, ahol is a tap szekunder oldalán van egy tranzisztor, ami a standby üzemmódot kapcsolja. A 18 éves BJC 1000 nyomtatómat atecseteltem alkohollal. Azóta nem működik. Az XP alatt is működött telepítés nélkül. Nem szívesen mondok le róla, mert meg nincs benne semmi chip ami limitálna a kinyomtatott mennyiséget, patron kapható, minőség nekem megfelelő. Eddig használtuk és semmi gond nem volt vele. Próbáltam újra telepíteni de most azt mondja, hogy a szoftver nem kompatibilis az op. Kerestem XP-s drivert de azzal sem megy. Win98-nál azt mondja, hogy nincs benne papír. Van valami ötletetek a fenti multifunkciós nyomtatóban megrepedt a tisztító egység vezérlését végző tengely. Tudnátok beszerzési forrást. Esetleg bontott is jó lenne. Similar manuals You can write in English language into the forum not only in Hungarian. Please read this guide before operating this product.
