The Presario family of computers was launched for the consumer marketplace in September 1993. In the mid1990s, Compaq began manufacturing PC monitors as part of the Presario brand. A series of allin one units, containing both the PC and the monitor in the same case, were also released. Although HP acquired Compaq in 2002, the Presario name was used until the Compaq brand was discontinued in 2013 by HP, due to its marketability issues.http://esistore.com/userfiles/casio-digital-diary-sf-3990-user-manual.xml

These retained the original spaceship shape of the second generation Compaq Presario towers, except most had smokedblack plastic flipup doors and a slightly squatter design that was more rounded.The monitors shared the same design cues All of them had a split lower bezel which ran down the middle, just like the towers they were meant to match. There is a very rare set of monitors the FX series which have builtin speakers and a subwoofer, and three extra USB ports. These are designed to go with the 4800 series Presario multimedia towers—specifically the 4830 to 4882, as they were all black like the FX monitor.The FX is the only exception, having builtin JBL Pro powered speakers with a subwoofer in the rear of the casing.This is the Australian version of the Compaq Presario.This is the first model in the desktop 2200 series.By using this site, you agree to the Terms of Use and Privacy Policy. This Compaq Computer can take up to 384 MB ram, with a fixed amount of 96 MB removable installed PC100 SDRAM DIMMs. This fullfeatured mainstream Computer enhances the previous generation Compaq models with the chipsets and new levels of customization. Get the best experience on your Compaq Presario 5726 Computer with improved performance, make it easy to create a home network and share all of your favorite items.The Presario 5726 is designed for users who require maximum performance in a mainstream Computer. Even with its form factor design, the Presario 5726 doesnt skimp on performance offering the ideal blend of power and efficiency. The Presario 5726 is sure to leave a lasting impression with its easy to use and slim design. Located on the side of the unit, the modular bays innovative latch is designed for easy insertion and removal of the various module options. The Presario 5726 Computer only supports

500MHz Intel Pentium III. The Presario 5726 features two onboard data caches for transferring information to and from the processor.http://givenuponchurch.com/userfiles/docs/casio-digital-diary-sf-4600-manual.xml

These caches are known as the L1 and L2 caches. The Presario 5726 L1 cache is 64 kilobytes in size, while its L2 cache is rated at either one or two megabytes. When you have a clear idea of which Computer best suits your needs, check for its specifications. As the Presario 5726 is supported by Compaq, check if the Computer has full support and warranties by its manufacturer, like Presario 5726 specs you will have lots of options from the Computer manufacturer to choose from, like the Computer processor, Computer RAM, its graphics capacity, Computer display options and specs, and other features that the Computer provides. You should have an idea on what specs you want from your Computer and what specs you do not want on your Computer, deciding on Computer specs may be difficult task to do but like the Presario 5726 specs have, its essential to selecting a Computer you need at a price tag that it deserves and that you can afford. Here is a sample Presario 5726 Computer specification if you want an initial guide to buy a Computer. The amount of RAM in your system is critical in assisting your computer to process its moment to moment operations, whether that is loading applications, browsing the web or editing a spreadsheet. The more RAM you have the quicker all your files, applications, web pages, etc. will run. As most people these days will have their computer performing many tasks at once, additional RAM will allow you to run these tasks unencumbered. You can overcome this issue by installing highdensity modules in each memory slot for seamless multitasking. Laptops gain an additional advantage with the installation of more memory; extended battery life. These days low voltage modules are a standard item as they deliver better performance but use less power and you can increase energy efficiency by up to 40%. Also, as previoulsy mentioned, additional RAM can eliminate regular paging of the HDD, thus saving the battery by performing tasks much quicker and far more efficiently. The short answer is yes, but only if you have a notebook or desktop. A large majority of notebooks have 2 memory slots which can be upgraded with either one of two modules. Many of these are shipped with 2 lowdensity modules of matching capacity. However when upgrading these types of notebooks you do not have to remove both modules and put in a matching pair.

http://elmariachimexican.com/images/caesar-ii-2011-technical-reference-manual.pdf

It is just as effective to keep 1 of the existing modules and replace the other one with a large capacity module. Most desktops have a similar set up. They generally have 2 or 4 memory slots that are upgradeable. Many times they are shipped with a matching pair. However when upgrading you need only to add one module at a time regardless whether the device was shipped with 1 module or 2 originally. Your HP desktop will run quite happily with 3 modules assuming it has 4 or more memory slots. Many parts resellers will advertise modules that may appear be a higher speci.e. faster then was originally determined by the manufacturer. However the irony is that the RAM must clock down to run at the speed determined by the BUS on the computer anyway so there is no advantage gained by installing memory modules with a higher rated speed. Customers come to us

with modules they have purchased elsewhere stating that they dont work in their computer. The reason is that the RAM is the incorrect speed and doesnt clock down to the BUS speed of the computer hence either not booting up or repeatedly crashing. The RAM is technically not faulty, its just incompatible for the purposes of upgrading their computer. The other issue of course is if you are installing new memory alongside existing memory modules. In many cases memory modules of differing speeds will not run together and will cause your device to be unstable, thus crashing frequently. If the existing RAM is DDR3 1066mhz, it is always best matching that specification to eliminate the possibility of any issues arising between the existing RAM and the new RAM. If you are removing the existing RAM and only installing newly purchased RAM it is still best to install the originally specified RAM as laid out by the manufacturer as you gain no advantage since the RAM will need to clock down AND of course you create the possibility of incompatibility issues.

Additional memory allows you to run more applications simultaneously without the computer slowing down. It also allows you to multitask to a much greater degree as your applications, email, web browsing, etc.If you find that it takes Windows a long time to load or your spreadsheets are taking minutes before they are ready to use, then you should consider swapping out your old spinning HDD for an SSD. SSDs will run up to 12 times faster then a HDD and will have Windows loading and ready to use within seconds instead of minutes. All complex programs, high res video, complex audio and other large applications will load, ready to use, within seconds instead of taking several minutes before being ready to utilise. In a working environment, waiting minutes each time a new program loads or for your computer to be ready to use, is a time consuming and costly exercise. Added up, wait times increase to hours lost when totaled over the course of just a week. None of us here have that kind of time to waste, do you Turn your laptop upside down and place it on a soft, clean surface such as a chair or couch cushion.
